### **City explains current water appearance**

**Kerrville, Texas (March 7, 2022)** – The City of Kerrville's water production unit has its surface water plant down for maintenance through this month. In the interim, the city is utilizing its water wells to provide drinking water. Well water is colder and has more dissolved air in it. When the water is put in a room temperature glass, the air comes out of solution and forms tiny bubbles, causing the water to look milky. The water is safe to drink, and the bubbles will rise to the surface and clear in a few moments.
